

Look Younger at Any Age

With I2PL Skin Rejuvenation

A Complete I2PL Skin Rejuvenation Program

The I2PL represents the next generation of intense pulsed light technology. The light from the Ellipse I2PL Intense Pulsed Light Device penetrates a few millimeters into the skin to perform skin rejuvenation by removing the blood vessels that cause diffuse redness as well as brown pigmentation. It kills bacteria that cause teenage and adult acne and treats Rosacea. The result is youthful, healthy looking skin.

By filtering out unnecessary light wavelengths, the Ellipse I2PL Pulsed Light Device reduces the risk of side-effects and skin injury and leaves you with smoother, clearer skin. The Ellipse I2PL safely and comfortably treats your facial areas, neck, décolleté, hands and forearms.

Dramatic improvements
can now be accomplished
with little or no "downtime"
and with very minimal
discomfort.

I2PL Treats:

Sun-damaged skin

Brown spots

Broken capillaries

Wrinkles

Pore size

Skin texture

Pigmentation

Rosacea

Adult Acne

Teenage Acne
